

AC-02 Interconnect Cable

This cable is of relatively pleasant sense of listening among the A series signal cables by our company. Its base material is American Straight Wire. The positive and negative cores in parallel arrangement is covered with densely-woven anti-disturbance shielding layer and flexible PVC shaping cover along with 24K gilded RCA terminal, outside of which is decorated with black and white nylon screen, both pleasant in touch and in vision.

The tone color of this cable is neutral and warm with excellent performance in high frequency. The medium frequency is bright and full with transparent sense of reality and profound music flavor. Especially the low frequency is clean and concentrated.
